Admiral

With its beautiful styling, quality craftsmanship and great comfort and support, the Admiral sits in our premium range with extra features including generous deep filled cushioning and a newly developed tilt-in-space action which can take up to 25st. This works by maintaining a consistent angle between the base and back of the chair as the footrest is elevated, therefore considerably reducing the occurrence and risk of pressure sores by evenly spreading the pressure when seated, and the high leg elevation position can also help improve your circulation. With two highly supportive backs, you can choose between the Waterfall back with its three adjustable cushions or the Lateral back which provides superior lateral support. The range is also available in a wide collection of materials allowing for more choice and variety in your home. A back-lit hand controller ensures that you can see each button easily and the quiet motor operation allows you to safely stand and recline. Discreet loops attached to both sides of the chair allow the controller to be hung safely in an easy to reach position and can be switched for both left and right-hand use. Large pockets are also located on each side expanding storage space and allowing for easy access to all the things you need. Also available is the Admiral Care which is upholstered in vapour permeable four-way stretch breathable fabric.
